Defense Energy Support Center (DESC), 8725 John J. Kingman Road, Room 3830, Fort Belvoir, Virginia 22060-6222.

Description

This is a SOURCES SOUGHT NOTICE to determine the availability of potential sources to privatize the electrical, natural gas, water distribution and wastewater collection infrastructure systems at Vance Air Force Base, Enid, Oklahoma. The **electrical distribution system** at Vance AFB is through a single 69-kilovolt kV transmission line into a substation located on the north end of the installation, west of Hairston Gate. The 69 kV transmission line feeds a 69/12.47kV, 7500 KVA transformer. The 12.47 kV distribution level voltage is fed underground to an electrical switching station, which is adjacent to the OG&E substation but is owned by the Air Force. The electrical distribution system consists of five 12470/7200 volt three-phase feeders. The distribution system consists of approximately 78,000 linear feet of underground service and an estimated 25,500 linear feet of overhead service. The **natural gas distribution system** is supplied to the base by Oklahoma Natural Gas Company via a single four-inch 200 psi supply line which is master-metered at the base perimeter. The distribution system consists of approximately 13 miles of underground main which is normally maintained at 16 psi; the main lines are all wrapped and coated steel pipe with cathodic protection. The **water distribution system** utilizes water supplied by the City of Enid via a single 10-inch main at approximately 60 psi. The base supply main carries water to a 300,000 gallon ground storage tank; water is pumped from there into a 500,000 gallon, 110 foot elevated storage tank. Water is distributed from that point through approximately 20 miles of mains, 90% of which are constructed of steel. The **wastewater system** consists of approximately 13.5 miles of sewer mains and one primary lift station and force main; five small lift stations and force mains are used to connect individual facilities into the main system. Wastewater is discharged into the City of Enid's sanitary sewer system for treatment. The Contractor(s) shall furnish all facilities, labor, materials, tools, and equipment necessary to own, maintain and operate the utility system(s) in a safe

and reliable condition. The Contractor(s) shall manage the maintenance, repairs, replacement, etc., of the system(s) to ensure continuous, adequate, and dependable service for each Government or tenant connection within the service area. Real property interests will be conveyed in the form of a Right of Way as an attachment to the RFP. The utility system(s) will be conveyed via a Bill of Sale upon award of the contract. At this time, no solicitation exists: therefore, DO NOT REQUEST A COPY OF THE SOLICITATION. Vendors having the skills and capabilities necessary to perform the stated requirement are invited to provide information to contribute to this market survey/sources sought including, commercial market information and company information via e-mail or facsimile (703-767-8757) to Mily Le, no later than Feb 3, 2003. Responses should include the following information: company name, address, point of contact, phone number and e-mail address; business size and disadvantaged, 8(a) or HUBZone status; corporate affiliations; potential joint venture partners, teaming partners, and or major subcontractor or (prime). Please specify which systems you are interested in and direct any questions or concerns to the Contract Specialist for this action: Bobby Jones rejones@desc.dla.mil
