

The following were clarifications asked for during the site visit at McGuire AFB, NJ:

Contractors from the second site visit requested locations for the installation of the two new flow meters, necessary to meter McGuire's flow. The requirement is included in our J4 attachment.

1. One flow meter is to be installed at Bldg 1507, the main lift station and will replace the current meter which is inoperative.
2. The second flow meter is to be installed at the manhole on Fort Dix before Pumping Station E, that measures flow from McGuire AFB only.
